

Shareholders of Attune RTD,

Mr. Bianco and I continue working to bring awareness of our BrioWave technology to the forefront of the energy markets so that we can actively discuss its relevance as it pertains to both retail consumers in the energy sector as well as management personnel on the demand energy side. Recently the Company has opened active communications with important utility players in Southern California that may lead to a pilot program that we believe will continue to validate BrioWave technology and more. As some of you may already know, Attune participated in a successful pilot program with TXU Energy several years back but the state of the economy and other factors weren't conducive to rolling out our solution at the time, but we believe that may be changing. Attune management continues to add and develop BrioWave technology and improve its application and integration with Solar that will add value on both the consumer and demand energy side of the equation.

Its management's opinion that we were ahead of the market with BrioWave technology and based on certain recent conversations with utility personnel, we believe our BrioWave time of use application is more relevant today than ever.

Based on these conversations, It is our understanding that California utilities are moving toward time of use (T.O.U.) rate plans to be implemented in 2019. As many of you know, Attune management has been vocalizing this move for nearly the past ten years. BrioWave technology was developed in part to assist both the utility and the consumer to happily co-exist within this structure driving both savings and added value functionality for both sides.

So, I am pleased to announce that Attune is currently in discussions with a California utility for the purpose of entering into a pilot program to demonstrate the value and functionality that Attune RTD's BrioWave technology offers for years to come.

The company is actively engaged in the process of further developing the technology to incorporate solutions for solar, electric charged vehicles, demand energy solutions, demand response solutions, and grid stability solutions that include the integration of residential electric cars that charge from the home.

We thank you for your ongoing patience, please stay tuned.

Yours Truly,

Shawn Davis
Attune RTD / c.e.o.
